- <b>Research</b>	Budget-funded scientific research project
- <b>Consultancy</b>	Internship supervisor and research supervisor
<b>How are personal research activities reflected in teaching activities?</b>	<p>In my teaching, I strive to integrate my personal research activities in ways that enhance both the content and the critical thinking skills of my students. My research helps to keep my teaching grounded in current developments and real-world applications, ensuring that the material I present is not only up-to-date but also relevant and engaging.</p> <p>For example, if my research focuses on a particular theory, concept, or issue in the subject area, I bring that knowledge into the classroom through case studies, examples, or discussions that illustrate how the research is contributing to advancements in the field. This not only makes the subject matter more dynamic but also allows students to see the connection between academic inquiry and practical, real-world challenges.</p> <p>Moreover, my research encourages a culture of inquiry in the classroom. By sharing my own research experiences—whether it's the process of formulating a research question, conducting literature reviews, or analyzing data—I aim to model critical thinking and problem-solving strategies. I encourage students to ask questions, challenge assumptions, and engage in their own research activities, fostering an environment where they feel empowered to explore and create new knowledge.</p> <p>In essence, my personal research activities help enrich my teaching by keeping it intellectually vibrant, connecting theory to practice, and cultivating a mindset of curiosity and investigation in students.</p>

<b>Work experience:</b>	
- <b>General</b>	Total 47 years of professional experience in managerial roles, 22 of them combined with academic roles
